CONTENTS

Preface xxvii

Chapter 1 Introductory Concepts 1

1.1 Transmission—Definitions 1
1.2 A Simplified Transmission System 1
1.3 The Decibel 2
1.4 Basic Derived Decibel Units 7
1.4.1 The dBm 7
1.4.2 The dBW 8
1.4.3 The dBmV 9
1.4.4 The Use of Decibels to Express Antenna Gain or Loss 9
1.4.5 Absolute Level of an Electromagnetic Field 9
1.5 The Neper 8
1.6 The Addition of Power Levels in dB (dBm/dBW) or Similar Absolute Logarithmic Units 10
1.7 Normal Distribution—Standard Deviation 12
1.8 The Simple Telephone Connection 14
1.9 The Practical Transmission of Speech 15
1.9.1 Bandwidth 15
1.9.2 Speech Transmission—The Human Factor 16
1.9.3 Attenuation Distortion 17
1.9.4 Phase Distortion and Envelope Delay Distortion 19
1.9.5 Level 21
1.9.6 Noise 23
1.10 Signal-to-Noise Ratio 31
1.11 The Expression E_b/N_0 32
1.12 Noise Figure 33

1.13 Relating Noise Figure to Noise Temperature 33
1.14 Effective Isotropically Radiated Power (EIRP) 35
1.14.1 The Concept of the Isotropic Antenna 36
1.15 Wavelength—Frequency Relationship 36
1.16 Longitudinal Balance 36
1.17 Some Common Conversion Factors 39
Review Exercises 40
References 42

Chapter 2 Telephone Transmission 43
2.1 General 43
2.2 Transmission Quality 43
2.3 The Telephone Instrument 44
2.3.1 Transmitters 46
2.3.2 Receivers 46
2.3.3 The Speech Signal 46
2.4 Introduction to the Subscriber Loop or Telephone Loop 48
2.4.1 Subscriber Loop Length Limits 49
2.5 Transmission Factors in Speech Telephony 50
2.5.1 Loudness 50
2.5.2 Methods of Rating a Telephone Connection for Loudness 51
2.6 Telephone Networks 57
2.6.1 General 57
2.6.2 Basic Considerations 57
2.6.3 Two-Wire/Four-Wire Transmission 58
2.6.4 Echo, Singing and Design Loss 61
2.6.5 Transmission Loss Plans 71
2.7 Subscriber Loop Design 75
2.7.1 Introduction 75
2.7.2 Calculation of the Resistance Limit 76
2.7.3 Calculation of the Loss (Attenuation) Limit 77
2.7.4 Loading 79
2.7.5 Subsriber Loop Design Plans—North American Practice 80
2.8 Design of Local Area Trunks (Junctions) 85
2.9 VF Repeaters 85
2.10 ITU-T Interface 86
2.10.1 Introduction 86
2.10.2 Maximum Number of Links in Tandem 87

2.10.3 Loudness Rating 89
2.10.4 Noise 89
2.10.5 Echo and Singing 89
2.10.6 Variation of Transmission Loss with Time 89
2.10.7 Attenuation Distortion 89
2.10.8 Group Delay (Phase Distortion) 90
2.10.9 Error in the Reconstituted Frequency 91
2.10.10 Crosstalk 91
2.10.11 One-Way Propagation Time 91
Review Exercises 93
References 95

Chapter 3 Multiplexing Techniques 97

3.1 Definition and Scope 97
3.2 Frequency Division Multiplex 98
3.2.1 Introduction 98
3.2.2 Mixing 99
3.2.3 The CCITT Modulation Plan 100
3.2.4 Loading of Multichannel FDM Systems 105
3.2.5 Pilot Tones 110
3.2.6 Noise and Noise Calculations 111
3.2.7 Compandors 113
3.3 Time Division Multiplex—PCM 116
3.3.1 What Is PCM? 116
3.3.2 Development of a PCM Signal 117
3.3.3 Operation of a PCM Codec (Channel Bank) 136
3.3.4 The Line Code 138
3.3.5 Signal-to-Gaussian-Noise Ratio on PCM Repeatered Lines 140
3.3.6 Regenerative Repeaters 141
3.3.7 Higher-Order PCM Multiplex Systems 143
3.3.8 Transmitting Data on PCM Links 155
3.4 Adaptive Differential PCM (ADPCM) 167
3.4.1 Introduction 167
3.4.2 Fixed-Rate ADPCM 167
3.5 Delta Modulation 170
3.5.1 Basic Delta Modulation (DM) 170
3.5.2 CVSD—A Subset of Delta Modulation 173
3.6 SONET and SDH 175
3.6.1 Introduction 175
3.6.2 SONET 175

3.6.3 Synchronous Digital Hierarchy (SDH) 189
Review Exercises 199
References 202

Chapter 4 Digital Networks 205
4.1 Scope and Rationale 205
4.2 Transmission Factors in PCM-Based Digital Networks 206
4.2.1 Introduction 206
4.2.2 Error Performance 207
4.2.3 Timing Jitter and Wander 217
4.2.4 Quantization Distortion as a Network Impairment 228
4.3 Network Synchronization 229
4.3.1 Introduction 229
4.3.2 The Network Switch—Responsible for Local Synchronization and Timing 231
4.3.3 Methods of Network Synchronization 232
4.3.4 CCITT/ITU-T Synchronization Plan 238
4.4 Digital Reference Signals and Processes 240
4.4.1 Digital Milliwatt 240
4.4.2 Digital Reference Signal 241
4.4.3 Digital Pads 241
4.4.4 North American Digital Transmission Conventions 242
4.5 Delay in Digital Networks 243
4.5.1 Delay Essentials 243
4.5.2 Estimating Delay 244
4.5.3 Delay from a Bellcore Perspective 245
4.6 Digital Subscriber Loop 246
4.6.1 Introduction 246
4.6.2 Generic Considerations for DLC Systems 248
4.6.3 High-Bit-Rate Digital Subscriber Line 250
4.6.4 Asymmetric Digital Subscriber Lines 253
Review Exercises 259
References 261

Chapter 5 Line of Sight Microwave 263
5.1 Introduction 263
5.1.1 Definition 264
5.2 Link Engineering 264

5.3 Propagation 266
5.3.1 Free-Space Loss (Spreading Loss) 266
5.3.2 Bending of a Radio Wave Ray Beam above 100 MHz from Straight-Line Propagation 267
5.3.3 Fresnel Zone Clearance 270
5.3.4 Path Profiling—Practical Application 272
5.3.5 Reflection Point 276
5.3.6 Penalty for Not Meeting Obstacle Clearance Criteria 276
5.3.7 Attenuation Through Vegetation 278
5.4 Path Calculations (Link Budget) 279
5.4.1 General 279
5.4.2 Basic Path Calculations 279
5.4.3 The Mechanisms of Fading—An Introductory Discussion 289
5.4.4 Methods of Estimating Fade Margin for Analog Microwave Links 290
5.4.5 Diversity Operation 293
5.4.6 Repeaters for Analog LOS Microwave Systems 299
5.4.7 Wideband FM Radio Noise Considerations 301
5.5 Digital Line-of-Sight Microwave 309
5.5.1 Definition and Scope 309
5.5.2 Applications 310
5.5.3 Basic Digital Radio and Link Design Considerations 310
5.5.4 Performance of Typical M-QAM Waveforms 321
5.5.5 Fading and Fade Margins on Digital LOS Microwave Links 329
5.6 Forward Error Correction (FEC) 336
5.6.1 Objective and Background 336
5.6.2 Basic Forward Error Correction 338
5.6.3 FEC Codes 341
5.6.4 Binary Convolutional Codes 347
5.6.5 Channel Performance of Uncoded and Coded Systems 355
5.6.6 Coding with Bursty Errors 360
5.7 Link Calculations for Digital LOS Microwave Systems 366
5.7.1 Review of E_b/N_0 366
5.7.2 Link Calculation Procedures 369

5.8 Digital LOS Microwave Terminal Systems 371
5.8.1 Transmitter/Receiver Subsystem 371
5.8.2 The Antenna Subsystem 374
5.9 System and Link Propagation Reliability (Time Availability) 380
5.10 Hot-Standby Operation 382
5.11 Service Channels 386
5.12 Alarm and Supervisory Subsystems 387
5.12.1 Transmission of Fault Information 388
5.12.2 Remote Control 389
5.13 Frequency Planning and the Interference Problem 390
5.13.1 General 390
5.13.2 Spurious Emission 391
5.13.3 Radio Frequency Interference (RFI) 391
5.13.4 Overshoot 392
5.13.5 Transmit–Receive Separation 392
5.13.6 Basis of Frequency Assignment 393
5.13.7 IF Interference 393
5.14 Antenna Towers and Masts 393
5.14.1 General 393
5.14.2 Tower Twist and Sway 394
5.15 Plane Reflectors as Passive Repeaters 397
Review Exercises 401
References 404

Chapter 6 Beyond Line-of-Sight: Tropospheric Scatter and Diffraction Links 409

6.1 Introduction 409
6.2 The Phenomenon of Tropospheric Scatter 410
6.3 Tropospheric Scatter Fading 411
6.4 Path Loss Calculations 412
6.4.1 Mode of Propagation 413
6.4.2 Basic Long-Term Tropospheric Scatter Loss 413
6.4.3 Attenuation Function 414
6.4.4 Basic Median Transmission Loss 417
6.4.5 The 50% Service Probability Case 419
6.4.6 Improving Service Probability 420
6.4.7 Example Problem 422
6.5 Aperture-to-Medium Coupling Loss 423
6.6 Takeoff Angle 425

6.7 Other Siting Considerations 427
6.7.1 Antenna Height 427
6.7.2 Distance to the Radio Horizon 427
6.7.3 Other Issues 428
6.8 Path Calculations 428
6.8.1 Basis 428
6.8.2 Overview of Procedure 428
6.9 Tropo Scatter/Diffraction Operational Frequency Bands 430
6.10 Antennas, Transmission Lines, Duplexers, and Other Related Transmission Line Devices 430
6.10.1 Antennas 430
6.10.2 Transmission Lines 433
6.10.3 The Duplexer 433
6.11 Isolation 434
6.12 Overcoming Dispersion—Another Approach 434
6.12.1 Introduction 434
6.12.2 Overcoming Dispersion by Gated Pulses 435
Review Exercises 437
References 438

Chapter 7 Satellite Communications 441
7.1 Background and Introduction 441
7.2 An Introduction to Satellite Communication 443
7.2.1 Two Broad Categories of Communication Satellites 443
7.2.2 Satellite Orbits 443
7.2.3 Elevation Angle Definition 445
7.2.4 Calculation of Azimuth, Elevation, and Range of a Geostationary Satellite 445
7.3 Frequency Bands Available for Satellite Communications 446
7.4 Link Design Procedures—The Link Budget 447
7.4.1 Introduction 447
7.4.2 Path Loss or Free-Space Loss 448
7.4.3 Isotropic Receive Level—Simplified Model 449
7.4.4 Limitation of Flux Density on the Earth's Surface 449
7.4.5 Thermal Noise Aspects of the Low-Noise Systems 450
7.4.6 Calculation of C/N_0 453
7.4.7 Gain-to-Noise Temperature Ratio G/T 455

7.4.8 Calculation of C/N_0 Using the Link Budget Technique 463
7.4.9 Calculating S/N—FM Analog Service 468
7.4.10 System Performance Parameters 472
7.5 Access Techniques 473
7.5.1 Introduction 473
7.5.2 Frequency Division Multiple Access (FDMA) 474
7.5.3 Time Division Multiple Access (TDMA) 482
7.6 Digital Operation on a Bent Pipe Satellite 483
7.6.1 Digital Advantages 483
7.6.2 Digital Operation of a Bent Pipe Satellite 483
7.6.3 Digital FMDA Operation 484
7.6.4 TDMA Operation on a Bent Pipe Satellite 489
7.7 Processing Satellites 494
7.7.1 Primitive Processing Satellite 494
7.7.2 Switched-Satellite TDMA (SS/TDMA) 496
7.7.3 IF Switching 499
7.7.4 Intersatellite Links 500
7.8 Link Budgets for Digital Satellites 501
7.9 VSAT (Very Small Aperture Terminal) 505
7.9.1 Definitions of VSAT 505
7.9.2 VSAT Network Applications 506
7.9.3 Technical Description of VSAT Networks 508
7.9.4 VSAT Access Techniques 509
7.10 Interference Issue with VSATs 514
7.11 INTELSAT Interfaces and Standards 517
7.11.1 Introduction 517
7.11.2 Standard A—Antenna and Wideband RF Performance Characteristics 517
7.11.3 Standard B—Antenna and Wideband RF Performance Characteristics 519
7.11.4 Standard C—Antenna and Wideband RF Performance Characteristics 519
7.11.5 Standard D—Antenna and Wideband RF Performance Characteristics 519
7.11.6 Standard E—Antenna and Wideband RF Performance Characteristics 520
7.11.7 Standard F—Antenna and Wideband RF Performance Characteristics 522
7.12 Satellite Earth Stations (Terminal Segment) 522
7.12.1 Functional Operational of a Standard Earth Station 522

7.12.2 VSAT System Terminals 532
Review Exercises 534
References 538

Chapter 8 Radio System Design Above 10 GHz 541
8.1 The Problem—An Introduction 541
8.2 The General Propagation Problem Above 10 GHz 542
8.3 Rainfall Loss 545
8.3.1 Basic Rainfall Considerations 545
8.3.2 Calculation of Excess Path Attenuation Due to Rainfall for LOS Paths 547
8.3.3 Calculation of Excess Attenuation Due to Rainfall for Satellite Paths 557
8.3.4 Utilization of Path Diversity to Achieve Performance Objectives 560
8.4 Excess Attenuation Due to Atmospheric Gases on Satellite Links 562
8.4.1 Example Calculation of Clear-Air Attenuation—Hypothetical Location 564
8.4.2 Conversion of Relative Humidity to Water-Vapor Density 567
8.5 Attenuation Due to Clouds and Fog 567
8.6 Calculation of Sky Noise Temperature as a Function of Attenuation 569
8.7 The Sun as a Noise Generator 570
8.8 Propagation Effects with a Low Elevation Angle 572
8.8.1 Defocusing Loss 573
8.8.2 Decrease in Antenna Gain Due to Wavefront Incoherence 573
8.8.3 Scintillation 574
8.8.4 Cross-Polarization Effects 575
Review Exercises 575
References 577

Chapter 9 High-Frequency Radio 579
9.1 General 579
9.2 Applications of HF Radio Communication 579
9.3 Composition of Typical HF Terminals 580
9.3.1 Basic Equipment 580
9.3.2 Basic Single-Sideband (SSB) Operation 582
9.3.3 SSB System Considerations 583
9.3.4 Linear Power Amplifiers 584

9.3.5 HF Configuration Notes 586
9.3.6 HF Link Operation 586
9.4 Basic HF Propagation 586
9.4.1 Introduction 586
9.4.2 Skywave Transmission 588
9.5 Choice of Optimum Operating Frequency 591
9.5.1 Frequency Management 598
9.6 Propagation Modes 608
9.6.1 Basic Groundwave Propagation 608
9.6.2 Skywave Propagation 608
9.6.3 Near-Vertical Incidence (NVI) Propagation 613
9.6.4 Reciprocal Reception 613
9.7 HF Communication Impairments 614
9.7.1 Introduction 614
9.7.2 Fading 618
9.7.3 The Effects of Impairments at the HF Receiver 619
9.8 Mitigation of Propagation-Related Impairments 622
9.9 HF Impairments—Noise in the Receiving System 623
9.9.1 Introduction 623
9.9.2 Interference 623
9.9.3 Atmospheric Noise 627
9.9.4 Man-Made Noise 633
9.9.5 Receiver Thermal Noise 635
9.10 Notes on HF Link Transmission Loss Calculations 636
9.10.1 Introduction 636
9.10.2 Transmission Loss Components 636
9.10.3 A Simplified Example of Transmission Loss Calculation 645
9.10.4 Groundwave Transmission Loss 646
9.11 Link Analysis for Equipment Dimensioning 651
9.11.1 Introduction 651
9.11.2 Methodology 651
9.12 Some Advanced Modulation and Coding Schemes 653
9.12.1 Two Approaches 653
9.12.2 Parallel Tone Operation 654
9.12.3 Serial Tone Approaches 657

9.13 Improved Lincompex for HF Radio Telephone Circuits 660
9.14 HF Antennas 661
9.14.1 Introduction 661
9.14.2 Antenna Parameters 663
9.15 Reference Fields—Theoretical References 670
9.16 Conversion of Radio-Frequency (RF) Field Strength to Power 672
Review Exercises 673
References 676

Chapter 10 Meteor Burst Communication 679

10.1 Introduction 679
10.2 Meteor Trails 680
10.2.1 General 680
10.2.2 Distribution of Meteors 681
10.2.3 Underdense Trails 682
10.2.4 Overdense Trails 683
10.3 Typical Meteor Burst Terminals and Their Operation 685
10.4 System Design Parameters 687
10.4.1 Introduction 687
10.4.2 Operating Frequency 687
10.4.3 Data Rate 688
10.4.4 Transmit Power 688
10.4.5 Antenna Gain 688
10.4.6 Receiver Threshold 688
10.5 Prediction of MBC Link Performance 689
10.5.1 Introduction 689
10.5.2 Receiver Threshold 689
10.5.3 Positions of Regions of Optimum Scatter 690
10.5.4 Effective Length, Average Height, and Radius of Meteor Trails 690
10.5.5 Ambipolar Diffusion Constant 692
10.5.6 Received Power 693
10.5.7 Meteor Rate 695
10.5.8 Burst Time Duration 699
10.5.9 Burst Rate Correction Factor 699
10.5.10 Waiting Time Probability 700
10.6 Design/Performance Prediction Procedure 701
10.7 Notes on MBC Transmission Loss 705
10.8 MBC Circuit Optimization 707

10.9 Meteor Burst Networks 707
Review Exercises 707
References 709

Chapter 11 Fiber Optic Communication Links 711

11.1 Overview 711
11.2 Introduction to Optical Fiber as a Transmission Medium 713
11.3 Types of Fiber 715
11.3.1 Causes of Attenuation in Optical Fiber 716
11.3.2 Fiber Strength 718
11.3.3 Dispersion in Optical Fiber Transmission 718
11.3.4 Notes on Monomode Transmission 722
11.4 Splices and Connectors 723
11.5 Light Sources 723
11.6 Light Detectors 728
11.7 Optical Amplifiers 734
11.7.1 Semiconductor Laser Amplifiers 735
11.7.2 Erbium-Doped Fiber Amplifiers (EFDAs) 735
11.8 Modulation and Electrical Waveform 736
11.9 System Design 741
11.9.1 General Application 741
11.9.2 Design Procedure 742
11.9.3 General Approach 743
11.9.4 Dispersion-Limited Domain and System Bandwidth 746
11.10 Wavelength Division Multiplexing (WDM) 747
11.10.1 Methods of Wave Division Multiplexing 749
11.10.2 WDM Impairments 750
11.11 Solitons 751
11.12 Notes on Outside Plant Installation 753
11.12.1 System Gain 753
11.12.2 Comments on Outside Plant (OSP) Loss 753
11.12.3 Planning an Installation 755
Review Exercises 759
References 761

Chapter 12 Cellular Radio and PCS 763

12.1 Introduction 763
12.1.1 Background 764
12.1.2 Scope and Objective 765

12.2 Some Basic Concepts of Cellular Radio 766
12.2.1 N-AMPS Increases Channel Capacity Threefold 770
12.3 Radio Propagation in the Mobile Environment 770
12.3.1 The Propagation Problem 770
12.3.2 Several Propagation Models 771
12.3.3 Microcell Prediction Model According to Lee 773
12.4 Impairments—Fading in the Mobile Environment 776
12.4.1 Introduction 776
12.4.2 Classification of Fading 777
12.4.3 Diversity—A Technique to Mitigate the Effects of Fading and Dispersion 780
12.4.4 Cellular Radio Path Calculations 782
12.5 The Cellular Radio Bandwidth Dilemma 782
12.5.1 Background and Objectives 783
12.5.2 Bit Rate Reduction of the Digital Voice Channel 783
12.6 Network Access Techniques 784
12.6.1 Introduction 784
12.6.2 Frequency Division Multiple Access (FDMA) 784
12.6.3 Time Division Multiple Access (TDMA) 785
12.6.4 Code Division Multiple Access (CDMA) 789
12.7 Frequency Reuse 797
12.8 Paging Systems 799
12.8.1 What Are Paging Systems 799
12.8.2 Radio-Frequency Bands for Pagers 800
12.8.3 Radio Propagation into Buildings 800
12.8.4 Techniques Available for Multiple Transmitter Zones 800
12.8.5 Paging Receivers 801
12.8.6 System Capacity 801
12.8.7 Codes and Formats for Paging Systems 802
12.8.8 Considerations for Selecting Codes and Formats 802
12.9 Personal Communications Services (PCS) 803
12.9.1 Defining Personal Communications 803
12.9.2 Narrowband Microcell Propagation at PCS Distances 804

12.10 Cordless Telephone Technology 808
12.10.1 Background 808
12.10.2 North American Cordless Telephones 808
12.10.3 European Cordless Telephones 808
12.11 Wireless LANs 811
12.12 Future Public Land Mobile Telecommunications Systems (FPLMTS) 811
12.12.1 Introduction 811
12.12.2 Traffic Estimates 811
12.12.3 Estimates of Spectrum Requirements 814
12.12.4 Sharing Considerations 816
12.12.5 Sharing Between FPLMTS and Other Services 816
12.13 Mobile Satellite Communications 817
12.13.1 Background and Scope 817
12.13.2 Overview of Satellite Mobile Services 817
12.13.3 System Trends 819
12.13.4 IRIDIUM 819
Review Exercises 829
References 832

Chapter 13 The Transmission of Digital Data 835

13.1 Introduction 835
13.2 The Bit and Binary Convention 836
13.3 Coding 837
13.3.1 Introduction to Binary Coding Techniques 837
13.3.2 Some Specific Binary Codes for Information Interchange 838
13.3.3 Hexadecimal Representations and the BCD Code 843
13.4 Error Detection and Error Correction 845
13.4.1 Introduction 845
13.4.2 Throughput 846
13.4.3 The Nature of Errors 846
13.4.4 Error Detection and Error Correction Defined 846
13.4.5 Error Performance 851
13.5 The dc Nature of Data Transmission 852
13.5.1 Loops 852
13.5.2 Neutral and Polar dc Transmission Systems 853
13.5.3 Some Common Digital Data Waveforms or Line Signals 853

13.6 Binary Transmission and the Concept of Time 855
13.6.1 Introduction 855
13.6.2 Asynchronous and Synchronous Transmission 856
13.6.3 Timing 858
13.6.4 Distortion 859
13.7 Data Interface 861
13.7.1 Introduction 861
13.7.2 Initial Considerations for Data Network Access and Control Procedure 862
13.7.3 Protocols 863
13.7.4 Interfacing the Physical Layer 872
13.8 Digital Data Transmission on an Analog Channel 880
13.8.1 Introduction 880
13.8.2 Modulation—Demodulation Schemes 880
13.8.3 Critical Parameters 882
13.8.4 Special-Quality International Leased Circuits 890
13.9 Channel Capacity 892
13.10 Voice Channel Data Modems Versus Critical Design Parameters 894
13.11 Equalization 896
13.12 Practical Modem Applications 898
13.12.1 Voice Frequency Carrier Telegraph 898
13.12.2 Medium-Data-Rate Modems 899
13.12.3 Notes on Trellis-Coded Modulation (TCM) 911
13.12.4 Data Rate at 28,800 bps—The V.34 Modem 914
13.13 Data Transmission on the Digital Network 924
13.14 Integrated Services Digital Networks (ISDN) 925
13.14.1 Introduction 925
13.14.2 ISDN User Channels 925
13.14.3 Basic and Primary Rate User Interfaces 926
13.14.4 User Access and Interface 927
13.14.5 Layer-1 Interface: Basic Rate 929
13.14.6 Layer-1 Interface: Primary Rate 932
13.14.7 BRI Differences in the United States 935
13.14.8 National ISDN 1, 2 and 3 939
13.15 An Overview of ATM and Its Transmission Considerations 940

13.15.1 Introduction 940
13.15.2 User–Network Interface (UNI) Configuration and Architecture 941
13.15.3 The ATM Cell—Key to Operation 944
13.15.4 Cell Delineation and Scrambling 950
13.15.5 Quality of Service (QoS) 953
13.15.6 Transporting ATM Cells 955
13.16 Data Transmission on Twisted Wire Pair 960
13.16.1 Introduction 960
13.16.2 Characteristics of a Wire Pair 961
13.16.3 Categories of Unshielded Twisted Pair (UTP) 961
13.16.4 General Characteristics of Specified UTP 962
13.16.5 UTP Transmission Characteristics 962
Review Exercises 963

Chapter 14 Community Antenna Television (Cable Television) 973

14.1 Objective and Scope 973
14.2 The Evolution of CATV 973
14.2.1 The Beginnings 973
14.2.2 Early System Layouts 975
14.3 System Impairments and Performance Measures 976
14.3.1 Overview 976
14.3.2 dBmV and Its Applications 977
14.3.3 Thermal Noise in CATV Systems 977
14.3.4 Signal-to-Noise Ratio (S/N) Versus Carrier-to-Noise Ratio (C/N) in CATV Systems 978
14.3.5 The Problem of Cross-Modulation (Xm) 982
14.3.6 Gain and Levels for CATV Amplifiers 983
14.3.7 The Underlying Coaxial Cable System 984
14.3.8 Taps 985
14.4 Hybrid Fiber–Coax (HFC) Systems 986
14.4.1 Design of the Fiber Optic Portion of HFC System 987
14.5 Digital Transmission of CATV 993
14.5.1 Approaches 993
14.5.2 Transmission of Uncompressed Video on CATV Trunks 993

14.5.3 Compressed Video 994
14.6 Two-Way CATV Systems 996
14.6.1 Introduction 996
14.6.2 Impairments Peculiar to Upstream Service 998
14.7 Two-Way Voice and Data Over CATV Systems According to IEEE 802.14 Committee Standard 999
14.7.1 General 999
14.7.2 Overview of the Media Access Control (MAC) 1000
14.7.3 Overview of the Physical Layer (PHY) 1001
14.7.4 Other General Information 1002
14.7.5 Media Access Control 1002
14.7.6 Downstream Operation 1008
14.7.7 Physical Layer Description for CATV HFC Networks 1013
14.7.8 Upstream Physical Layer Specification 1018
Review Exercises 1023

Chapter 15 Video Transmission: Television 1027
15.1 Introduction 1027
15.2 An Appreciation of Video Transmission 1028
15.2.1 Additional Definitions 1031
15.3 The Composite Signal 1031
15.4 Critical Video Transmission Impairments 1034
15.5 Critical Video Parameters 1034
15.5.1 General 1034
15.5.2 Transmission Standard—Level 1034
15.5.3 Other Parameters 1038
15.6 Video Transmission Standards (Criteria for Broadcasting) 1041
15.6.1 Basic Standards 1041
15.6.2 National Standards 1041
15.6.3 Color Transmission 1041
15.6.4 Standardized Transmission Parameters (Point-to-Point TV) 1043
15.7 Methods of Program Channel Transmission for Television 1046
15.8 Transmission of Video Over Radiolinks 1046
15.8.1 General 1046
15.8.2 Bandwidth of the Baseband and Baseband Response 1050

15.8.3 Preemphasis 1051
15.8.4 Differential Gain 1051
15.8.5 Differential Phase 1051
15.8.6 Signal-to-Noise Ratio (10 kHz to 5 MHz) 1052
15.8.7 Radiolink Continuity Pilot 1052
15.9 TV Transmission by Satellite Relay 1052
15.10 Basic Tests for Video Quality 1054
15.10.1 Window Signal 1054
15.10.2 Sine-Squared Test Signal 1054
15.10.3 Multiburst 1055
15.10.4 Stair Steps 1055
15.10.5 Vertical Interval Test Signals (VITS) 1056
15.10.6 Test Patterns 1056
15.10.7 Color Pairs 1057
15.11 Digital Television 1057
15.11.1 Introduction 1057
15.11.2 Basic Digital Television 1057
15.11.3 Bit Rate Reduction—Compression Techniques 1059
15.11.4 MPEG-2 Compression and Related Standards 1061
15.12 Conference Television 1080
15.12.1 Introduction 1080
15.12.2 The px64-kbps Codec 1081
15.13 Frame Structure for a 64–1920-kbps Channel Transport for Video Conferencing 1085
15.13.1 Objective 1085
15.13.2 Basic Principle 1085
15.13.3 Frame Alignment Signal (FAS) 1087
15.13.4 Bit Rate Allocation Signal (BAS) 1088
15.13.5 Encryption Control Signal (ECS) 1088
15.13.6 Frame Alignment 1089
15.13.7 Multiframe Structure 1089
15.13.8 Loss and Recovery of Frame Alignment 1091
15.13.9 Search for Frame Alignment Signal (FAS) 1092
Review Exercises 1092

Chapter 16 Facsimile Communication 1097

16.1 Introduction 1097
16.2 Basic Facsimile Operation 1097
16.2.1 General 1097

16.2.2 Scanning 1099
16.2.3 Recording/Printing 1100
16.3 Fundamental System Interface and Operation 1102
16..3.1 General 1102
16.3.2 Phasing and Synchronization 1102
16.3.3 Automatic Facsimile Operation Based on ITU-T Rec. T.30 1102
16.4 Digital Transmission of Facsimile 1112
16.4.1 Introduction 1112
16.4.2 Equipment Dimensions—DIN A4 1112
16.4.3 Transmission Time per Total Coded Scan Line 1112
16.4.4 Coding Scheme 1114
16.5 Facsimile Coding Schemes and Coding Control Functions for Group 4 Facsimile Equipment 1117
16.5.1 Introduction 1117
16.5.2 Basic Coding Scheme 1117
16.5.3 Coding Procedure 1119
16.6 Military Digital Facsimile Systems 1121
16.6.1 Definitions 1121
16.6.2 Technical Requirements for Type I and Type II Facsimile Equipment 1122
16.6.3 Image Coding Schemes 1123
16.7 Digital Compression and Coding of Continuous-Tone Still Images—JPEG 1124
16.7.1 Introduction 1124
16.7.2 Lossy and Lossless Compression 1126
16.7.3 DCT-Based Coding 1126
16.7.4 Lossless Coding 1128
16.7.5 Modes of Operation 1129
16.7.6 Entropy Coding Alternatives 1131
16.7.7 Sample Precision 1132
16.7.8 Multiple-Component Control 1132
16.7.9 Structure of Compressed Data 1133
16.7.10 Image, Frame, and Scan 1134
16.7.11 Summary of Coding Processes 11.35
Review Exercises 1136
